

There is a new BBC News article that reports that the earth's magnetic shield is older than scientists previously thought. The story can be read here:

<http://www.bbc.com/news/science-environment-33721393>

Scientists say the magnetic shield makes the earth unique when compared to other planets, because it shields out harmful solar radiation. This is only one of the thousands of “lucky accidents” making the earth just right for life! Actually, it's the work of the **“one perfect in knowledge.” (Job 36:4)**
