

According to an article published on March 11, 2016 on BBC News, a newly discovered fossil gives an “extraordinary” insight into life just before the dinosaurs disappeared. It says “at the time, the world was recovering from a massive extinction that wiped out most living species.”

Why could this “massive extinction” not be the Biblical flood of Noah’s day? (Genesis 6-8)
The article goes on to say “the fossil is ‘beautiful’ and fills an evolutionary gap.” But all this is is a reptile that was not previously known to exist by modern science. It’s no “missing link.” All creatures were to reproduce “according to their kinds” (Genesis 1:11,12,21,24,25). There is no contrary evidence to prove the Bible wrong.
